Segmented Vertex Chain Coding with Huffman Coding

Chen, Po-Yueh; Liao, Hsien-Chou; Chang, Chih-Peng

Abstract

To significantly decrease the amount of information while still preserving the contour shape, chain coding is widely applied to digital images analysis, especially to those raster-shaped ones. In this paper, chain coding is integrated with the Single-side Grown Huffman Table (SGHT) to improve the data compression rate.

Key words : Chain coding; Huffman code
